Dr. Marc Geissberger dedicated 30 years to teaching at the University of the Pacific, where he led the esteemed rehabilitation program. In addition, he is a researcher and published author, specializing in dental materials, contemporary fixed prosthodontics, and esthetic dentistry. He also acts as a consultant for various dental materials companies, assisting in product development.

Dr. Geissberger is a member of the Catapult Education Speakers Bureau. He has delivered over 450 lectures and hands-on workshops across multiple countries. He has co-authored and published numerous scientific papers, as well as a textbook titled "Esthetic Dentistry in Clinical Practice."

Dr. Geissberger aims to create a non-intimidating educational experience for audiences, focusing on providing clinicians with the latest techniques and information that can be seamlessly integrated into their daily practice. His presentations are rich in content, and Dr. Geissberger is committed to both entertaining and educating his audience.

COURSE DESCRIPTION

This fast-paced program will introduce clinicians to multiple injection molding concepts, techniques, and applications. Treatment planning and case selection from simple to complex cases will be reviewed. A variety of techniques will be introduced and reviewed, giving the participant a better understanding of what is required to optimize results. Materials and armamentariums that lend themselves to injection molding will be explored. Proper bonding, placement, and finishing techniques will be discussed.

LEARNING OBJECTIVES

- Understand how injection molding may fit into clinical practice with step-by-step techniques.
- Gain a working understanding of various techniques and when to consider their use.
- Learn the proper armamentarium for various injection molding techniques.
- Learn protocols for finishing and polishing to yield the most esthetic results.
